ABOUT US

Mode-AL is the leader in the design and manufacture of multiple monitor mounting solutions for Industrial Process Control, Digital Signage, Broadcast, the collaborative environment, and high-end AV.

Being acknowledged as the originator of the first Flat Screen Monitor Stacks, has enabled Mode-AL to develop an enviable, global client base of broadcasters, system integrators and end-user clients such as, BBC, BT, Cisco, Airbus, Turner, Sky, Sony, PayPal, Morgan Stanley, Nato, Ernst & Young, Price Waterhouse Coopers, Ford, Aviva, Bank of America, Bloomberg, Mercedes, Siemens, UK & US governments and many more.

We seamlessly integrate our unique structures with technology by offering a turn-key solution of consultation, design, manufacture and installation. Many projects also involve liaison with designers and construction contractors during a build or refurbishment.

Mode-AL offers a unique approach - we design for life. Whether ergonomically or chronologically, our products are designed to outperform and outlast those of our competitors, with the added advantage that when end of life is reached, the units can either be re-tasked with additional components or they can be 100% recycled.

We truly are the Display Engineers.
